

# aquasorb

## Water-retaining polymer crystals (20-80 mesh) Super-absorbent potassium-based polyacrylamide crystals

- ▶ Absorbs up to 500x its weight to form a gel
- ▶ Increases the availability of water to plants
- ▶ Absorbs and stores water & dissolved nutrients
- ▶ Helps prevent plant stress
- ▶ Saves irrigation costs by reducing frequency of watering.

Aquasorb is recommended for use in potting mixes, container plants & turf.

### Directions for use

#### 1. For use when planting

Add 10 g of crystals to approx. 1 L of water and allow 1 hour for full hydration of the crystals. Mix 1 part of hydrated crystals to 10 parts potting mix or soil.

#### 2. For incorporation in potting media

Add 0.5-1.0 kg / m<sup>3</sup> of potting mix or according to recipe recommendation.

### Safety directions

Wear protective equipment to avoid skin and eye irritation. Avoid inhaling dust. Slip hazard when wet—do not clean up spills using water, sweep or vacuum to contain spills.
