Recommendation for application:

Thanks to its even granulation the fertilizer can be applied easily with spreaders or by hand. Nutrient distribution is even as every granule contains all nutrients and micronutrients. Application is possible during the whole vegetation period. Watering-in promotes the immediate effect.

Description of fertilizer properties :

Granulated complex fertilizer with potassium sulfate (SOP) and nitrification inhibitor DMPP (3,4-dimethylpraxolephosphate) for basal and complementary dressings in chloride sensitive crops and on salt- affected soils.

DMPP reduces N-leaching and increases N-efficiency. For a period of 4 to 10 weeks, depending on soil temperature and soil humidity, the transformation of ammonium to nitrate is delayed.

N-availability is further adapted to the plant's requirements and N-efficiency is increased.

For usage in horticulture and special crops, outdoors and under glass.
