# ANTI CONDENS

**Prevents the formation of condensation droplets on the inside of greenhouses**

**Mardenkro AntiCondens** prevents the formation of condensation droplets on the inside of greenhouses. AntiCondens therefore increases light levels inside the greenhouse and lowers the chance of damage to the plants due to diseases such as *Botrytis*. AntiCondens can be applied to plastic film, polycarbonate and acrylic. It is a water-based product. If used properly it is safe to use above most crops. It is recommended that plant safety is checked by exposing a plant to AntiCondens under the prevailing circumstances and to check for damage at some time after exposure.

#### **Directions for use**

Mix 1 part of AntiCondens with 15 parts of clean water. Apply the product by spraying from the gutter to the ridge on a dry and clean surface. For best results allow AntiCondens to dry thoroughly before condensation starts. At a mixing rate of 1:15, 1,000 m<sup>2</sup> of surface area coverage will require approximately 7 litres of AntiCondens to be added to 90 litres of water.

#### **Storage**

AntiCondens must be stored in a frost-free location and below 35 °C. AntiCondens is available in 5 litre and 25 litre cans.
