

TECHNICAL SHEET

NovaTec[®] Maize

A granulated fertiliser with the latest technology of both sustained nitrogen (NovaTec[®]) and 90-day ESN controlled-release nitrogen (coated urea).*

**ESN = Environmental Sustained Nitrogen*

NovaTec[®] Maize

18 N + 6 P + 8 K

+ 1.1 Mg

(elemental)

+ essential trace nutrients

Maximum Nitrogen matched to your crop's needs

NovaTec[®] Maize is the latest addition to our range of NovaTec[®] products from HortFertplus. It combines the benefits of both NovaTec[®], an innovative NPK fertiliser stabilised with DMPP, and ESN*-coated urea, a 90-day controlled-release fertiliser (at a soil temperature of 20°C).

Sustained Nitrogen availability to plants

- More efficient nitrogen feeding
- Improved crop performance
- Nitrogen available over 90 to 120 days (depending on soil temperature), matching crop growth.

Improved plant growth

- Less plant energy wasted to take up ammonium-N
- Increased availability of Phosphorus and micronutrients.

Improved crop quality

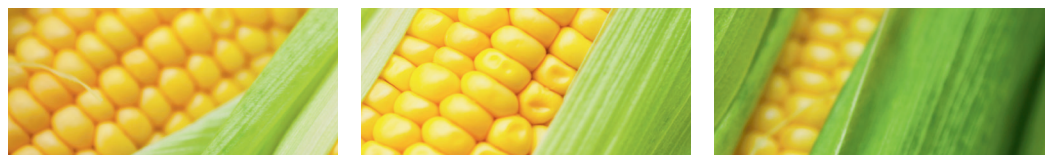

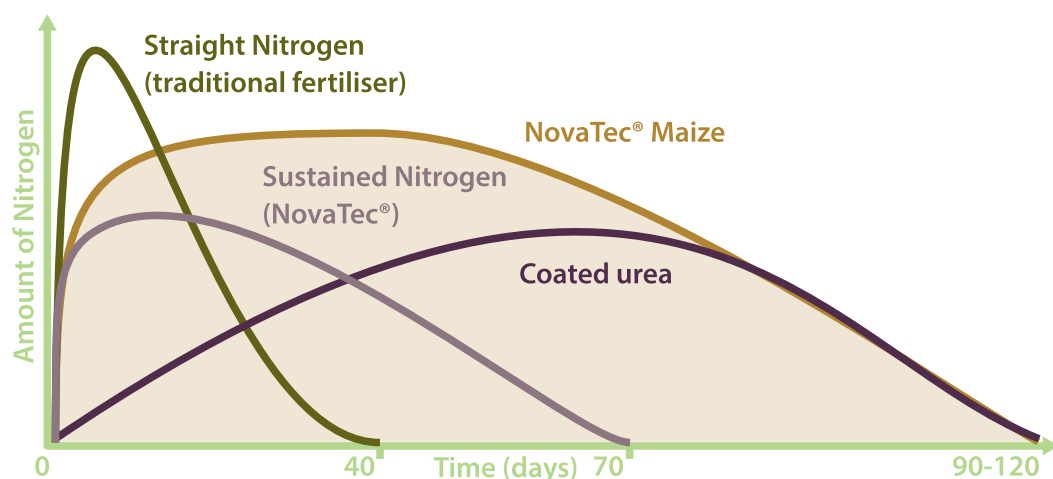

- Greater nutrient availability
- Reduced Nitrate content of plants
- Low salinity due to SOP and no Chloride.

Improved environmental care

- Reduced Nitrogen leaching into ground water
- Reduced Nitrogen loss into air by volatilisation.

Improved handling and spreading

- Mid-sized granules (2-4 mm) and low dust.
