

Essentials | Micronutrients
Non chelated

Boric Acid 17.5%

Composition (%w/w)

Boron	17.5%
-------	-------

Agronomical Targets

Compatibility

Compatible with other fertilizers. The pH of the tank solution should be above 4.

Packaging

Van Iperen Boric Acid 17.5% is a pure and highly concentrated Boron fertilizer. Our product is recommended as a post-harvest application and prior to flowering. The high level of Boron in our formula improves cell division and cell wall formation.

- It overcomes stunted growth and increases drought and heat tolerance
- Developed for foliar application and fertigation
- Soft for leaf tissue

Product Characteristics

- White crystals
- Rapidly dissolvable
- Easy to handle, dissolve and apply

Did you know?

Micronutrients are nutrients needed in very small quantity. However, their impact on plant performance is crucial. They are needed in vital physiological processes, such as photosynthesis, phytohormone production, sugar migration, coloration and many others. Van Iperen offers adequate Micronutrient solutions for all growing conditions.

Exact dosages, concentration and application stage are subject to local conditions, use of other fertilizers and can only be given after an objective diagnosis.

Let's make the green switch!

We are Van Iperen International a Dutch producer of Specialty Fertilizers and Biostimulants. We are eager to change the rules of the game in plant nutrition, by providing highly innovative solutions to growers for more sustainable agriculture. Your local Van Iperen Sales Manager will help you and guide you to make the green switch together.
