

TECHNICAL SHEET

Floranid® range

Reliable slow release Nitrogen fertiliser with Isodur®. For intensive horticultural crops, ornamentals and turf.

Floranid® N 31 31 N + 0 P + 0 K

A high potassium & magnesium slow-release fertiliser for incorporation in potting mixes and top dressing of containers. Also used in turf and landscaping.

Floranid® Club 10 N + 2.2 P + 17 K + 2.4 Mg (elemental)

+ trace nutrients including 0.5% Fe

25 kg bags

Floranid® N 31

An economical slow-release fertiliser suitable for intensive horticultural crop, ornamentals and turf, all year round.

Main benefits

- Contains 32% Nitrogen – 12% fast acting and 88% as longer lasting (Isodur®)
- Slow release Nitrogen gives predictable release across a wide pH and temperature range, even in cool conditions
- Feeds for 3 - 4 months
- Can be incorporated in media, used as a top dressing fertiliser for container stock or broadcast on the media surface
- Kind to your plants – low salt index. Note: Avoid spreading granules on leaves of young plants or sensitive crops.

Floranid® Club

A granulated NPK slow release fertiliser with emphasis on potassium, magnesium and trace elements. For turf, landscaping, incorporation in potting mixes and top dressing of containers.

Main benefits

- High potassium (K) & magnesium (Mg) levels to promote flowering.
- Also provides “growth control” for turf, landscape trees and forestry plants.
- Promotes plant hardiness and disease resistance.
- Contains 0.5% iron – very desirable for turf and any media based on bark and/or coir fibre.
- Contains both fast-acting and slow-release nitrogen to maintain “greening”.
- Releases slowly over 2–3 months meaning plant safety and no growth flushes.
