

WUXAL Foliar Fertiliser Liquids

WUXAL Liquids reach the highest content of completely dissolved nutrients in a clear solution. The premium quality nutrients are fortified by selected additives to guarantee high compatibility and excellent uptake rates into the plant.

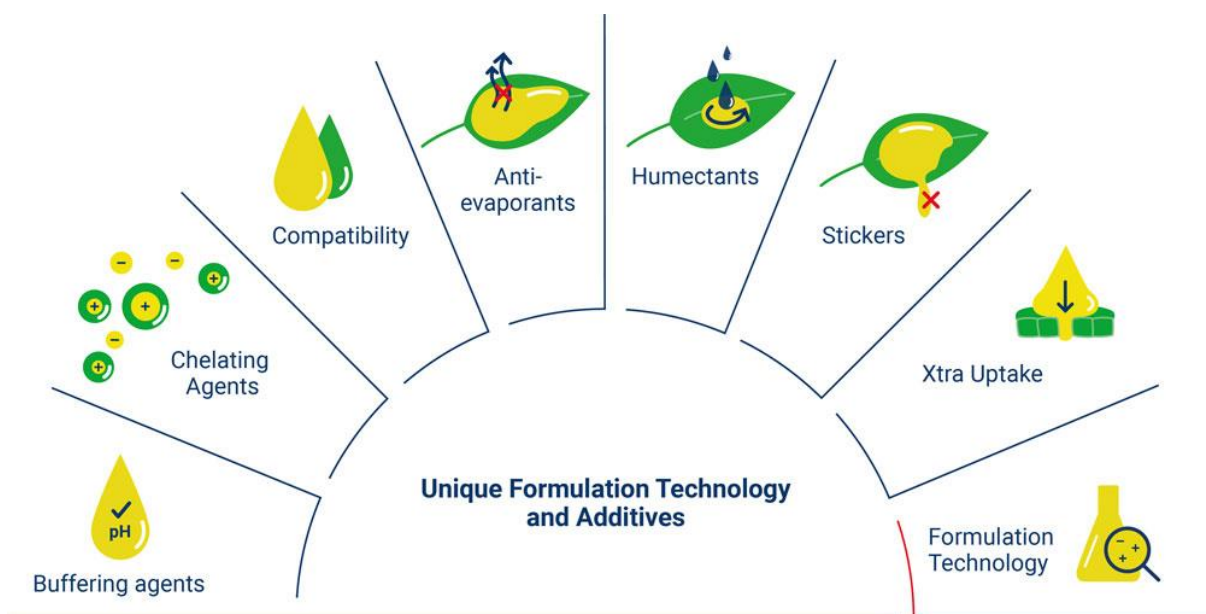

WUXAL liquid fertilisers are easy to handle. They are instantly ready for quick and easy application. Simply pour the liquid into your tank and you can apply the product immediately, even after an extended storage period.

WUXAL Foliar Fertiliser Suspensions

WUXAL Suspensions guarantee a maximum of fully plant-available nutrients in a minimum of volume. The full range of integrated additives greatly improves nutrient absorption, crop safety and efficacy. WUXAL Suspension Fertilisers not only use high quality raw materials but are also developed for the best compatibility with most plant protection products.

The highly-developed stabilisation network in WUXAL Suspensions allows for long periods of storage and highest convenience during usage at the same time. Our suspension fertilisers must be shaken before use. This temporarily inactivates the stabilisation network. Once shaken, the nutrients are evenly distributed and ready for application.

WUXAL Biostimulants

Your crops get a boost from our wide range of high-quality products with added biostimulant value. Amino acids and seaweed extracts are formulated to trigger a variety of beneficial effects.

The balance of hormones within a plant is a complex interaction which controls growth and development. Materials (such as phytohormones in seaweed or other plant extracts) that alter the hormonal condition of a plant can exert great influence on its overall growth and health.

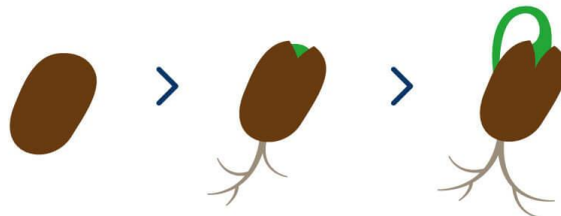

WUXAL Seed Treatments

Advanced WUXAL Suspension formulations have been developed to enhance seed performance through nutrient treatments prior to sowing. This is the most efficient technique for covering early nutrient demand that is needed for quick emergence.

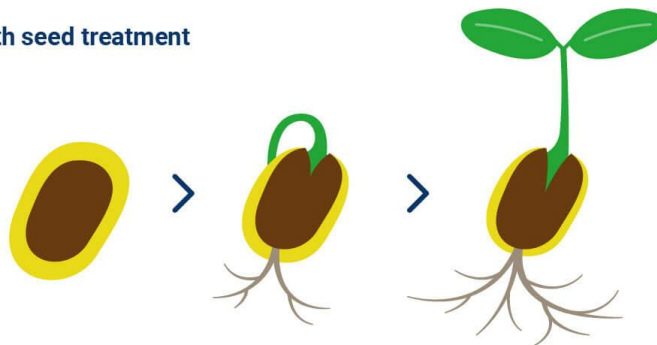

Seedlings usually rely on small seed reserves and have a very limited root system. Nutrient seed treatment significantly increases nutrient reserves in the seed. This provides optimal support to early plant development, leading to a stronger stock establishment and better yields. Plants overcome the initial vegetation period more easily. With a faster start, nutrient reserves in the soil can be accessed much faster by the developed root system.

Explore the WUXAL difference!

High-quality raw materials, innovative formulation technology and other advanced properties offer you the highest level of value for your investment. WUXAL® products are dependable and safe even after prolonged storage periods. Learn more about our [formulation technology](#) and [additives](#) on our webpage.

Formulation Technology

WUXAL Foliar Fertilisers are developed for greatest convenience. WUXAL products show consistent quality and optimal handling properties even after prolonged storage. It enables a formulation of maximum possible concentration of fully plant-available nutrients. Raw materials are of the highest quality to guarantee best crop safety and very good compatibilities.

Additives

Buffering Agents

- pH adjustment of the spray solution to an optimal level
- improved uptake, efficiency, and pesticide stability

Chelating Agents

- nutrients remain available to the plant
- increased absorption of nutrients and pesticides

Compatibility

- optimal efficiency of fertilisers and plant protection products
- convenient handling

Anti-Evaporants

- persistent spray solution
- nutrients remain available for the plant

Humectants

- prolonged and optimized absorption
- improved utilisation

Stickers

- improved nutrient acquisition, even after rain
- no loss of nutrients

Xtra Uptake

- unique surfactant and penetrant technology
- uniform wetting and enhanced nutrient absorption efficiency
